Instruction

In this practice session, we are going to practice using the table tags in HTML to create a table on a webpage.

1. We've already done a bit of a setup for you by adding some scaffolding code for you. You can start working directly inside the body element.
2. Start by creating a table tag inside the body element. This table will contain 3 columns (Sr.No., Name, Marks) where the last column "Marks" will be sub-divided into 2 columns (Score, Percentage). Add the thead and tbody tags.

```
<table>
  <thead> </thead>
  <tbody> </tbody>
</table>
```

3. Next add two rows in the table head as shown below.

```
<table>
  <thead>
    <tr>
      <th rowspan="2">Sr. No.</th>
      <th rowspan="2">Name</th>
      <th colspan="2">Marks</th>
    </tr>
    <tr>
      <th>Score</th>
      <th>Percentage</th>
    </tr>
  </thead>
  <tbody> </tbody>
</table>
```

4. Finally, add three tr tags, each with td tags, in the tbody tag, one per row.

```
<tbody>
  <tr>
    <td>0101</td>
    <td>John Doe</td>
    <td>98.01</td>
    <td>98.01 %</td>
  </tr>
  <tr>
    <td>0102</td>
    <td>Mark Handsome</td>
    <td>92.01</td>
    <td>92.01 %</td>
  </tr>
  <tr>
    <td>0103</td>
    <td>Alice Nunch</td>
    <td>97.67</td>
    <td>97.67 %</td>
  </tr>
</tbody>
```
