Instruction

In this practice session, we are going to practice using the `img` tag in HTML to display the images on a webpage. You will also practice the `src`, `alt`, `width` and `height` attributes.

1. We've already done a bit of a setup for you by adding some scaffolding code for you. You can start working directly inside the `body` element.

2. Start by creating an `img` tag inside the `body` element. Add the image URL. The image is available inside the `images` folder. Also add the `alt` attribute and use any text as the value.

```

```

3. Finally, add the `height` and `width` attributes and set the `width` and `height` attributes. Set the values to `50%` each.

```

```

4. Your completed code should look like this:

```
<body>
  
</body>
```
